

RS1-10 Steering Guide

**Intermediate Guiding
For Web Widths Up to 15 Inches (380mm)**

The **RS1-10** Steering Guide is a compact steering guide ideal for the narrow web industry. It features a single raceway assembly with 1-inch racerods and is powered by a 5-inch diameter air cylinder. The guide rollers move laterally on the linear raceway assembly and simultaneously pivot in the same direction to correct the misalignment. An entering web span of twice the web width is considered a minimum safe entering span prior to the steering guide. A pre-entering span must also be maintained shorter than the entering span. Preferred threading is a single or double roller guide with 90° wrap, or when desirable, a straight through “S” wrap threading can be used.
