

RS2-10 Steering Guide

Double Roller

Intermediate Guiding For Web Widths
From 35 Inches (890mm) to 120 Inches (3050mm)

The **RS2-10** Steering Guide is ideal for the plastic film, multi-wall bag, coating, laminating and flexographic printing industry. Its features a double raceway assembly with 1-inch raceroles and is usually powered by a 5 or 6-inch diameter air cylinder. The guide rollers move laterally on the linear raceway assembly and simultaneously pivot in the same direction to correct the misalignment. An entering web span of twice the web width is considered a minimum safe entering span prior to the steering guide. A pre-entering span must also be maintained shorter than the entering span. Preferred threading is a single or double roller guide with 90° wrap, or when desirable, a straight through “S” wrap threading can be used.
