

Roll Stand Control For Use On Existing Shifting Stands

The **RSC60** is a completely assembled and pre-piped *Roll Stand Control* System. It is designed to attach directly to an existing shiftable unwind stand and automatically position an unwinding roll of material to a predetermined point as the web enters a process. The *sensor* (not shown) mounts independent of the stand (after the last shifting idler) and does not move during the unwind process. This compact guiding assembly is ideally suited for new machines as well as retrofits (upgrade) on older machines. Power is provided by a 6" air cylinder with either a 4" or 6" stroke. Maximum loading is 2,000 lbs. (909 Kg).
